

Oakmark Equity and Income Fund

At Oakmark, we are long-term investors. We attempt to identify growing businesses that are managed to benefit their shareholders. We will purchase stock in those businesses only when priced substantially below our estimate of intrinsic value. After purchase, we patiently wait for the gap between stock price and intrinsic value to close.

Objective

Fund seeks income preservation and growth of capital. The Fund is primarily composed of U.S. equity and fixed-income securities.

The performance data quoted represents past performance.

Past performance does not guarantee future results. The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Total return includes change in share prices and, in each case, includes reinvestment of dividends and capital gain distributions. To obtain most recent month-end performance data, visit Oakmark.com. Before investing in any Oakmark Fund, you should carefully consider the Fund's investment objectives, risks, management fees and other expenses. This and other important information is contained in a Fund's prospectus and summary prospectus. Please read the prospectus and summary prospectus carefully before investing. For more information, please visit Oakmark.com or call 1-800-OAKMARK (1-800-625-6275).

The cumulative effect of fees and expenses can substantially reduce the growth of a participant's or beneficiary's retirement savings. For more information regarding the long-term effects of fees and expenses on an investment, visit the Department of Labor's website at: http://www.dol.gov/ebsa/publications/401k_employee.html

Investing in value stocks presents the risk that value stocks may fall out of favor with investors and underperform growth stocks during given periods.

Harris Associates L.P., the Fund's adviser, contractually agreed to limit the Oakmark Equity and Income Fund's annual expenses to 1% of its average net assets through January 31, 2002. Absent this expense limitation, the Fund's total return would have been lower.

Market Cap is the market price of an entire company. The Price-to-Earnings (P/E) Ratio is the most common measure of how expensive a stock is. Price-to-Cash Flow (P/C) is defined as a stock's capitalization divided by its cash flow. The Price-to-Book (P/B) Ratio is a stock's capitalization divided by its book value. P/E, P/C and P/B are projected calculations based on our analysts' estimates. Standard deviation is an indicator of the Fund's total return volatility. Yield

represents a fund's income return on capital investment for the past 12 months, expressed as a percentage.

The Blended Balanced Index is comprised with 60% weight given to the S&P 500 Total Return Index and 40% weight given to the Bloomberg Barclays U.S. Government/Credit Bond Index and is rebalanced monthly. The S&P 500 Total Return Index is a float-adjusted, capitalization-weighted index of 500 U.S. large-capitalization stocks representing all major industries. It is a widely recognized index of broad, U.S. equity market performance. The Bloomberg Barclays U.S. Government/Credit Bond Index measures the non-securitized component of the U.S. Aggregate Index. It includes investment grade, U.S. dollar-denominated, fixed-rate Treasuries, government-related and corporate securities. The Lipper Balanced Fund Index measures the equal-weighted performance of the 30 largest U.S. balanced funds as defined by Lipper. These indexes are unmanaged and investors cannot invest directly in these indexes.

The Oakmark Equity and Income Fund invests in medium- and lower quality debt securities that have higher yield potential but present greater investment and credit risk than higher quality securities, which may result in greater share price volatility. An economic downturn could severely disrupt the market in medium or lower grade debt securities and adversely affect the value of outstanding bonds and the ability of the issuers to repay principal and interest.

Oakmark Equity and Income Fund: The stocks of medium-sized companies tend to be more volatile than those of large companies and have underperformed the stocks of small and large companies during some periods.

The Fund's portfolio tends to be invested in a relatively small number of stocks. As a result, the appreciation or depreciation of any one security held by the Fund will have a greater impact on the Fund's net asset value than it would if the Fund invested in a larger number of securities. Although that strategy has the potential to generate attractive returns over time, it also increases the Fund's volatility.
